Long list

The database provides mortality data for three different cause-of-death classification schemes: a short list, an intermediate list, and a long list. This is the long list, which has been determined based on the medical, social or statistical importance of specific causes of death. As the reference for international comparisons, the list based on ICD-10 codes is consistent with the abridged version of the Soviet classification. The long list includes 209 categories and is not subject to change with time. Three of these categories are used for deaths of ill-defined causes (see below).

** For the reconstructed series, but not for the series in the original classifications ill-defined and unknown causes of death (ICD10 codes R00-94, R96-R99) were redistributed among the other causes of death. A detailed description of the redistribution methods used is provided in the country specific "Background and Documentation" files. The total number of death counts, which have been redistributed, is given for each country in the individual "Ill-defined death counts" files.*
